Course Specification

Course Title: Ergonomics Essentials (including manual handling and DSE)
Code: W506
Level: Advanced

Pre-requisites: None

Course Material: Student manual available from OH learning.com
Coordinating Editor: Alison Bell
Approval Date: August 2011
Last Review: October 2015

Aims
This course aims to:
Provide a broad based introduction to ergonomic principles and their application in the design of work, equipment and the workplace. Consideration is given to musculo-skeletal disorders, manual handling, ergonomic aspects of the environment as well as to the social and legal aspects.

Learning Outcomes
On completing this course successfully the student will be able to:

- apply ergonomic principles to the creation of safer, healthier and more efficient and effective activities in the workplace;
- conduct ergonomic risk assessments;
- develop appropriate control measures for ergonomic risk factors;
- describe work-related causes of musculo-skeletal disorders;
- design a workplace according to good ergonomic principles;
- assess ergonomic aspects of the working environment and work organisation.

Course Format
Normally run as a 5 day taught course [minimum 45 hours including lectures, tutorials, practical/demonstration sessions, guided reading, overnight questions and examination].

There will be a 40 short answer question "open book" examination with an allowed time of 120 minutes.

Detailed Course Content

1 Overview of Ergonomics (20%)
Introduction to ergonomics and its scope in relation to work. Outline of the disciplines of anatomy, physiology and psychology, with respect to ergonomics building blocks such as anthropometry and biomechanics.

1.1 General Principles
1.1.1 Aims, objectives and benefits of ergonomics
1.1.2 Definition and scope of ergonomics and systems of work
1.1.3 The role of the ergonomist
1.1.4 Fitting the job to the person and the person to the job
1.1.5 Human characteristics, capabilities and limitations
1.1.6 Human error
1.1.7 Teamwork and ageing
1.1.8 Interfaces between job, person and environment
1.1.9 Human computer interaction

1.2 Biological Ergonomics
1.2.1 Body systems - musculo-skeletal and nervous
1.2.2 Anatomy, static and dynamic anthropometry
1.2.3 Biomechanics
1.2.4 Applying work physiology - body metabolism, work capacity and fatigue
1.2.5 Static and dynamic postures

1.3 Psychology
1.3.1 Perception of risk
1.3.2 Motivation and behaviour
1.3.3 Memory
1.3.4 Signal Detection Theory and vigilance
1.3.5 'Work 'Stress'- causes, preventative and protective measures
1.3.6 Work organisation - shift working and overtime

1.4 Developing an Ergonomics Strategy at Work
1.4.1 Culture of an organisation - commitment and decision-making
1.4.2 'Macro-ergonomics' and participatory ergonomic teams
1.4.3 Ergonomics at the design stage
1.4.4 Developing ergonomics, professional ergonomists and competence

2 Ergonomics Methods and Techniques (20%)
Observational experimental methods are identified which can be used for investigation, so that work, equipment and planned systems can be improved for human use.

2.1 Work Design
2.1.1 Task analysis and allocation of functions
2.1.2 User trials
2.1.3 Problem solving - scientific method

2.2 Ergonomics Risk Assessment
2.2.1 Definitions of hazard and risk
2.2.2 Priorities
2.2.3 Risk evaluation quantity and quality of risk
2.2.4 Assessment systems
2.2.5 Overall ergonomics approach
2.2.6 Control measures monitoring and feedback

2.3 Measurements and Information Gathering
2.3.1 Ergonomics standards
2.3.2 Observational techniques
2.3.3 Rating scales, questionnaires and check lists
2.3.4 Use of models and simulation
3 **Musculo-Skeletal Disorder (20%)**

The disorders resulting from manual handling and repetitive work must be covered and the causes explained. The methods of assessment and the techniques used to prevent or reduce these disorders must also be covered.

3.1 **Manual Handling**

3.1.1 The nature and causes of manual handling disorders

3.1.2 Risk assessment

3.1.3 Job design and training

3.1.4 Principles of handling and preventative and protective measures

3.2 **Work Related Upper Limb Disorders (WRULD)**

3.2.1 The nature and causes of WRULD/ 'Repetitive Strain Injuries'/Cumulative Disorders

3.2.2 Risk assessment

3.2.3 Principles of control, preventive and protective measures

4 **Workplace, Job and Product Design (20%)**

Key features in the design of workplaces, jobs and their results - products and services - are outlined, so that more effective and healthier work can be achieved. Existing data and routes to further sources of information are emphasised.

4.1 **Workplace Layout and Equipment Design**

4.1.1 Principles of workstation and system design

4.1.2 Space and workstation design principles

4.1.3 Risks to health:

- Musculoskeletal problems
- Visual fatigue
- Mental stress
- Requirements for eye tests

4.1.4 Design considerations for Visual Display Unit (VDU) Stations:

- Ergonomic factors
- Work stations
- Design of work and practice
- Carrying out assessments of risk at VDU workstations

4.2 **Controls, Displays and Information**

4.2.1 Visual, auditory and other displays

4.2.2 Quantitative and qualitative information

4.2.3 Compatibility and population stereotypes

4.2.4 Warnings, signs and labels

4.2.5 Sources and selection of data

4.2.6 Principles of software ergonomics

5 **Relevant Physical Factors of the Work Environment (10%)**

Physical factors of the working environment must include the way the eye, ear and clothed body respond qualitatively to light, sound heat etc., so that human performance can be predicted and improved. This part of the syllabus should be regarded as an overview and thus technical and quantitative detail should be minimised.

5.1 **Lighting**

5.1.1 Visual acuity and colour vision

5.1.2 Lighting levels, contrast and glare

5.1.3 Reflections and flicker fusion

5.2 **Noise**

5.2.1 Noise induced hearing loss

5.2.2 Distraction, annoyance and emergency signals

5.3 **Thermal Environment**

5.3.1 Body temperature regulation and acclimatisation

5.3.2 Subjective assessments - thermal comfort and discomfort
5.4 Other Considerations
   5.4.1 Smell, taste and tactile senses
   5.4.2 Vibration - effects and subjective assessment

5.5 Clothing and Protective Equipment
   5.5.1 Objective and subjective effects
   5.5.2 Risk perception, and wearability
   5.5.3 Design, style and fit

6 Standards and Social Aspects (10%)
   Consideration should be given to sources of standards covering ergonomics, social aspects and
   training, instruction and supervision requirements.
   6.1 Standards
      6.1.1 ISO standards
      6.1.2 Sources of other standards
   6.2 Selection and Training
      6.2.1 Training Needs Analysis
      6.2.2 Testing and interview techniques
   6.3 Instruction and Supervision
      6.3.1 Health information, legal requirements
      6.3.2 Supervision and records
      6.3.3 Measuring health and illness

### Outline Details

All candidates must participate in the practical studies and demonstrate the required skills. The studies should be designed by the course tutor(s) to test the basic skill and knowledge of each of the candidates.

Full details of the practical requirements and the individual candidate reporting forms etc. are available in document JF.2 Practical Evaluation Report which is available from www.bohs.org and www.ohlearning.com.

40 short answer questions to be answered in 120 minutes. The questions require candidates to write short answers which will require no more than the box provided but may include multiple answers. Some questions may require calculations.

Students can only refer to the W506 student manual during the examination.

Is the student required to pass ALL elements of assessment in order to pass the course? Yes
